

## Fabfile Online Updates North American Top 50 PCB Fabricators

---

As we all know, the marketplace is rapidly changing. To keep up with the fast-moving changes in the industry, we've taken the time to update the top producers of PCBs in North America. As you can see, the top 50 has grown to the top 57 in consideration of those seven companies which share sales representing the last position on our list of the top 50--we didn't feel it would be fair to exclude them from the list.

Sales estimates are not included, but they range from \$596 million down to \$13 million.

With this published update, we've identified companies which have laser direct imaging (L) equipment or which offer PCB assembly (A). We have done our best to compile an accurate list for the readers of PCB007.
